

Lab 3: Implementing Elastic Load Balancer (ELB)

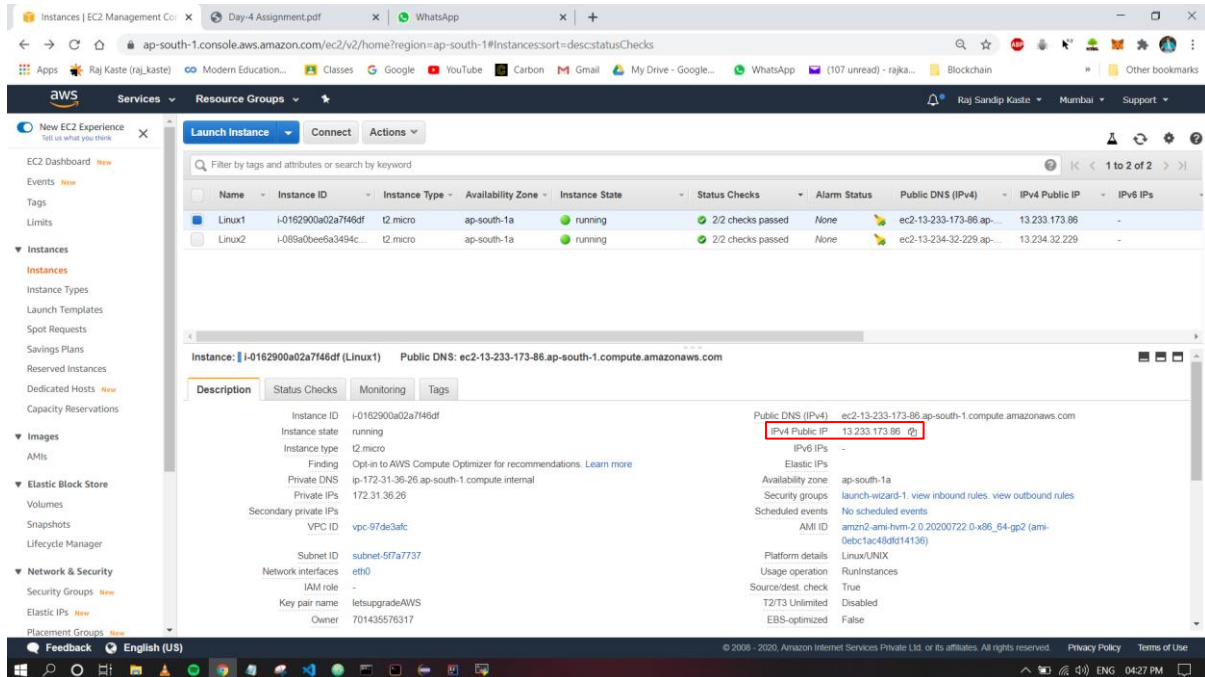

Fig 1: 1st Linux instance

Public IP: 13.233.173.86

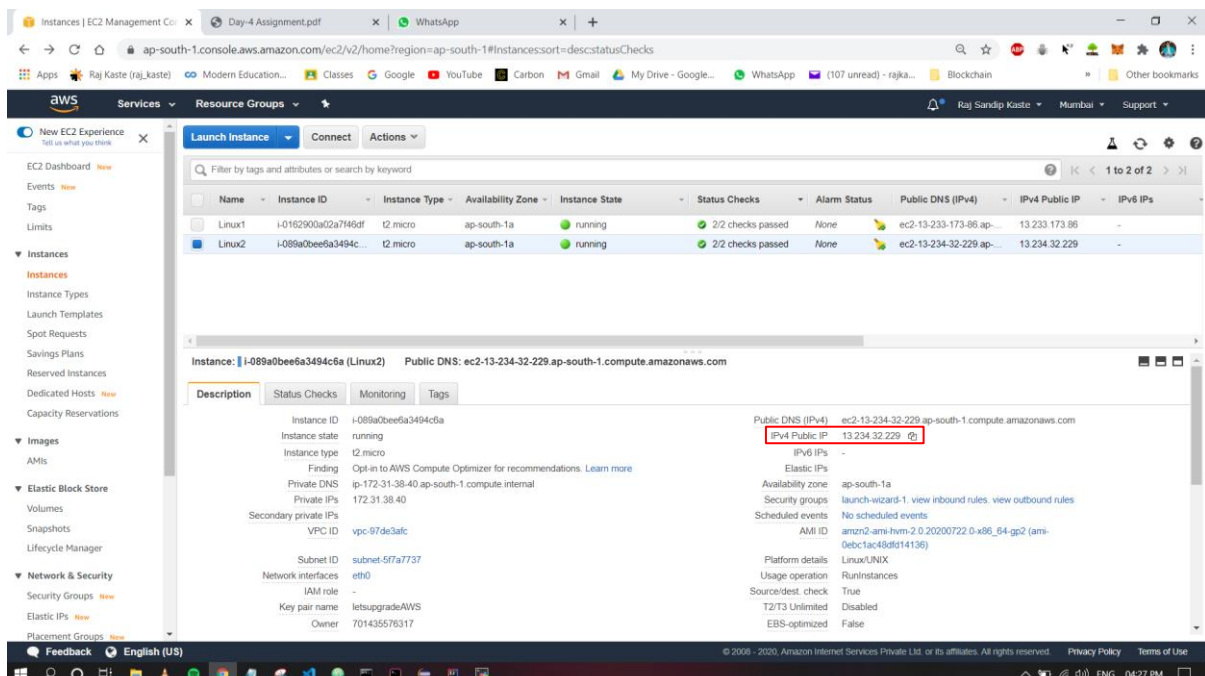

Fig 2: 2nd Linux Instance

Public IP: 13.234.32.229

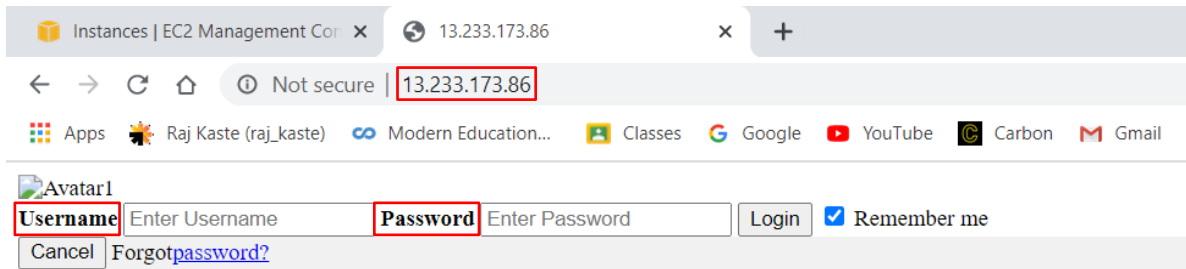

Fig 3: Linux1-Instance's server launched

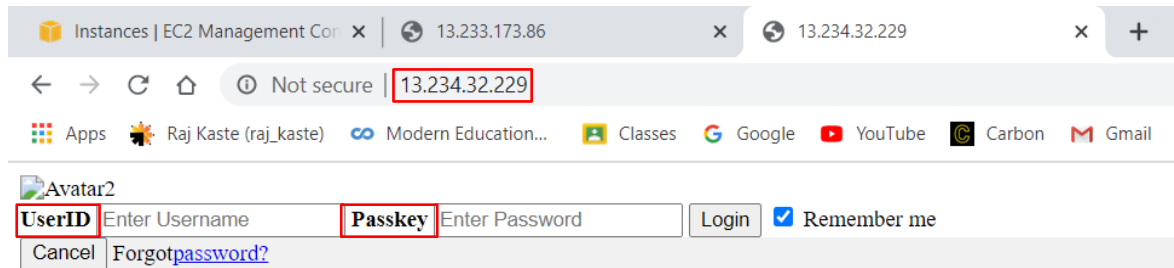

Fig 4: Linux2-Instance's server launched

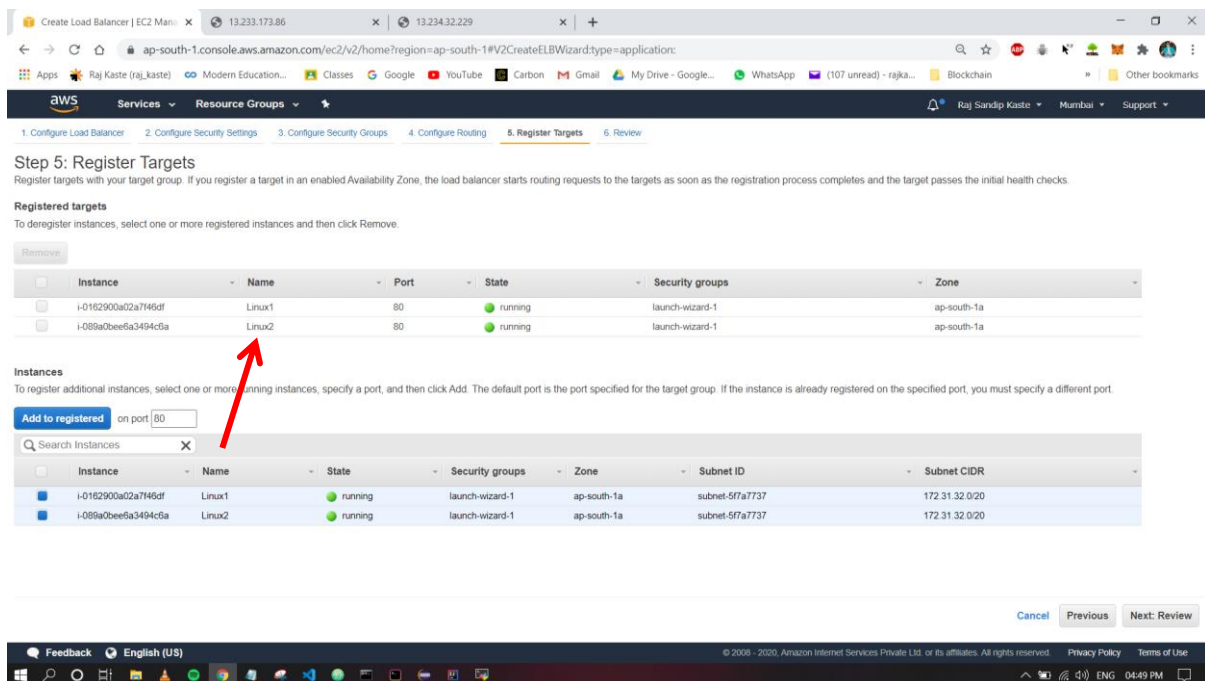

Fig 5: Both the instances registered as targets in the ELB

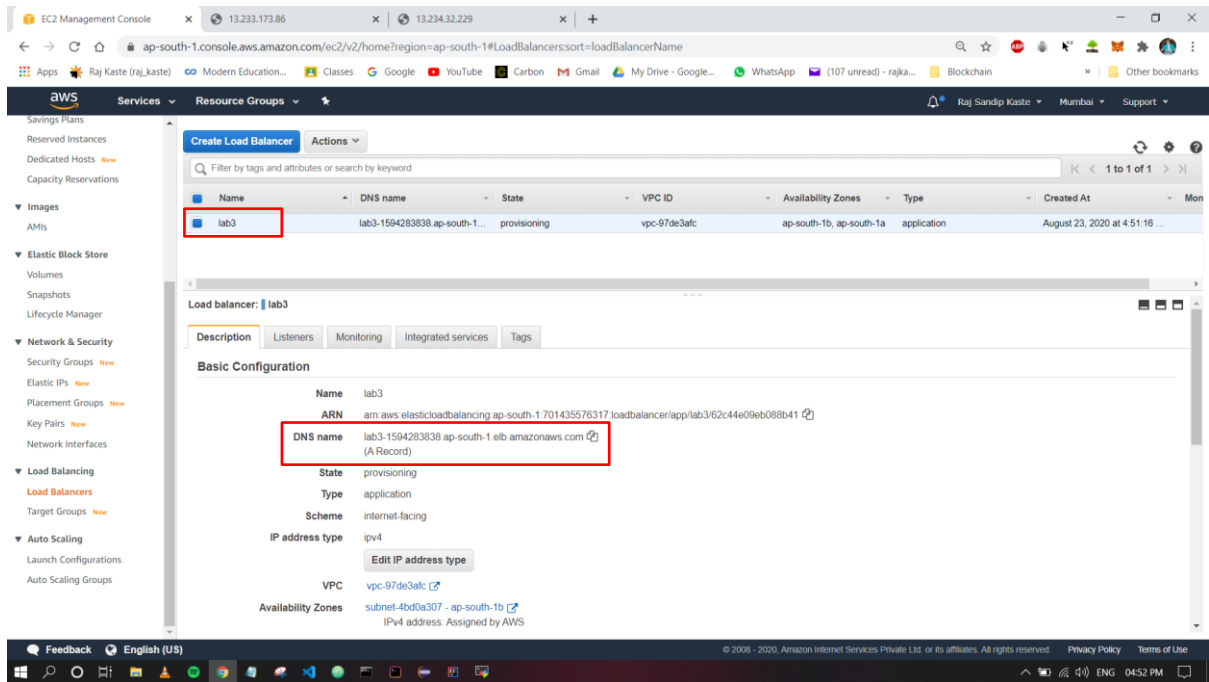

Fig 6: ELB created

DNS: lab3-1594283838.ap-south-1.elb.amazonaws.com

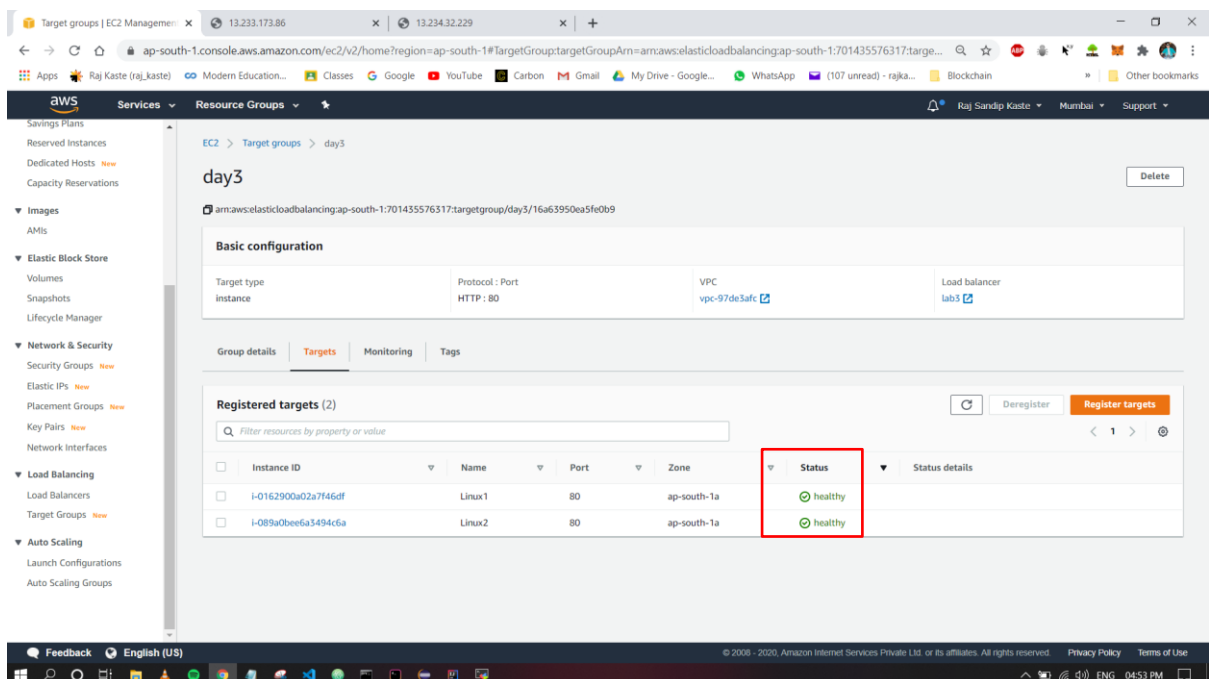

Fig 7: Both the instances checked as healthy i.e. they are successfully registered in the ELB

DNS: lab3-1594283838.ap-south-1.elb.amazonaws.com

Fig 8: Load sent on Linux1 server

Fig 9: Load sent on Linux2 server
